## Big Data Systems

## <u>Project #3 – Graph Databases/Neo4j</u>

Due Date: July 5<sup>th</sup>, 2019

In this project you will be given a dataset and you will represent it in the relational model, in the graph model, run some queries and measure performance.

- 1. Go to Stanford Large Network Dataset Collection (<a href="https://snap.stanford.edu/data/#socnets">https://snap.stanford.edu/data/#socnets</a>)
- 2. Use the Pokec dataset in Social Networks category (<a href="https://snap.stanford.edu/data/soc-Pokec.html">https://snap.stanford.edu/data/soc-Pokec.html</a>)
- 3. For each user keep user\_id, age and gender.
- 4. Load data in MySQL and Neo4j
- 5. Write queries in SQL and Cypher for the following queries and benchmark both:
  - For each user, count his/her friends
  - For each user, count his/her friends of friends
  - For each user, count his/her friends that are over 30
  - For each male user, count how many male and female friends he is having
